
Contents

1	Operating Systems	1
1.1	Introduction	1
1.2	Multitasking and threading	11
1.3	Example operating system components (Microsoft Windows)	14
1.4	Exercises	20
1.5	Example operating systems	22
1.6	Note from the Author	27
2	Processes and Scheduling	28
2.1	Introduction	28
2.2	Scheduling	29
2.3	Higher-level primitives	40
2.4	Signals, pipes and task switching (UNIX-implementation)	40
2.5	Messages	42
2.6	Microsoft Windows scheduling	42
2.7	UNIX process control	43
2.8	Finite-state machines	47
2.9	Exercises	48
3	Distributed Processing	52
3.1	Introduction	52
3.2	Interprocess communication	54
3.3	Flags and semaphores	55
3.4	RPC	65
3.5	Multi-processor systems	72
3.6	Exercises	75
4	Distributed File Systems	78
4.1	Distributed File Systems	78
4.2	Active Directories	89
4.3	Exercises	89
4.4	Sample exam question	90
5	Routing Protocols	78
5.1	Introduction	78
5.2	Routing fundamentals	79
5.3	Routing protocol techniques	81
5.4	RIP	88
5.5	OSPF	89
5.6	IGRP	91
5.7	EGP/BGP	91
5.8	BGP specification	93
5.9	Exercises	96
5.10	Sample exam question	99
6	Routers	100
6.1	Introduction	100
6.2	Router configuration and startup	102
6.3	Router commands	103
6.4	Access Control Lists (ACLs)	112
6.5	Cisco discovery protocol	115
6.6	Exercises	117
6.7	Cisco router commands	120
7	Networking Operating Systems	124
7.1	Introduction	124
7.2	Microsoft Windows	124
7.3	UNIX	134
7.4	Novell NetWare	139

iv *Network Operating Systems*

7.5	NDS	147
7.6	Exercises	161
7.7	XDR format	163
8	Encryption	168
8.1	Introduction	168
8.2	Encryption and the OSI model	168
8.3	Cryptography	170
8.4	Government pressure	173
8.5	Cracking the code	173
8.6	Letter probabilities	174
8.7	Basic encryption principles	176
8.8	Message hash	184
8.9	Private-key	184
8.10	Public-key	185
8.11	Authentication	186
8.12	Internet Security	187
8.13	Exercises	187
8.14	Letter probability program	190
8.15	Occurrences of English letters, digrams, trigrams and words	191
